FIRST 4 SAFETY

Practical assurance for your workplace

On-Site Assurance

A fresh pair of eyes can make a big difference when it comes to identifying risks on-site, particularly when managers and supervisors are busy. Independent checks on the activities your workers are undertaking can help reduce the risk of complacency around hazards and health and safety.

At First 4 Safety, we can:

- Conduct compliance monitoring inspections to ensure workers and contractors are following instructions and using accepted safe operating procedures.
- Carry out targeted health and safety inspections on tasks being undertaken by contractors to ensure you are meeting your legal responsibilities.

External Audit Preparation

If you are looking for independent verification that your workplace safety systems are robust, you may be considering having your business formally recognised under an external certification scheme. Options include the ACC Accreditation Systems and AS/NZS Health and Safety Standards.

To help you prepare for the external audits involved in certification schemes, we can review your health and safety framework and give you support in making changes before you are audited.

SUSTAINABILITY ASSURANCE AUDIT
